Digital Signage Solutions
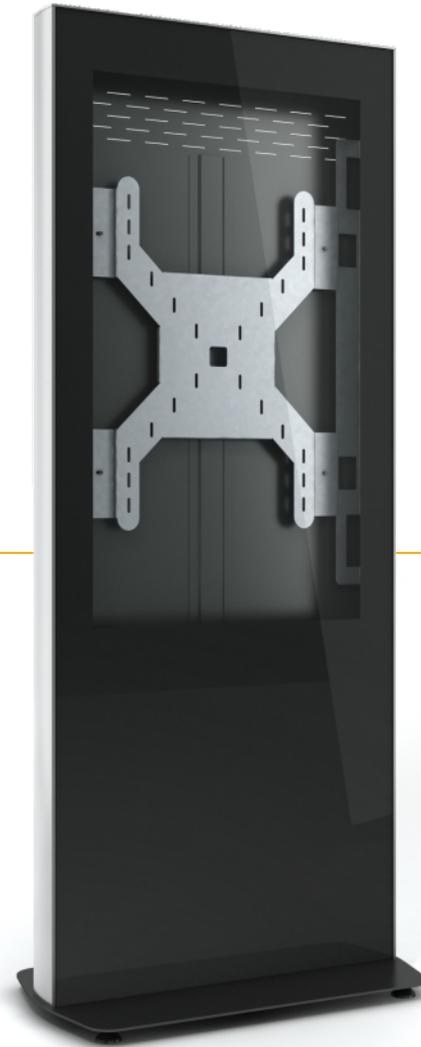

Z01 Totem Installation Instruction

Step 1

- First, place the product that taken out of the box on a table or worktop with the back cover facing the floor as shown in the illustration.

- Then, remove the metal part shown in yellow in the drawing with Allen 6 that comes out of the box.
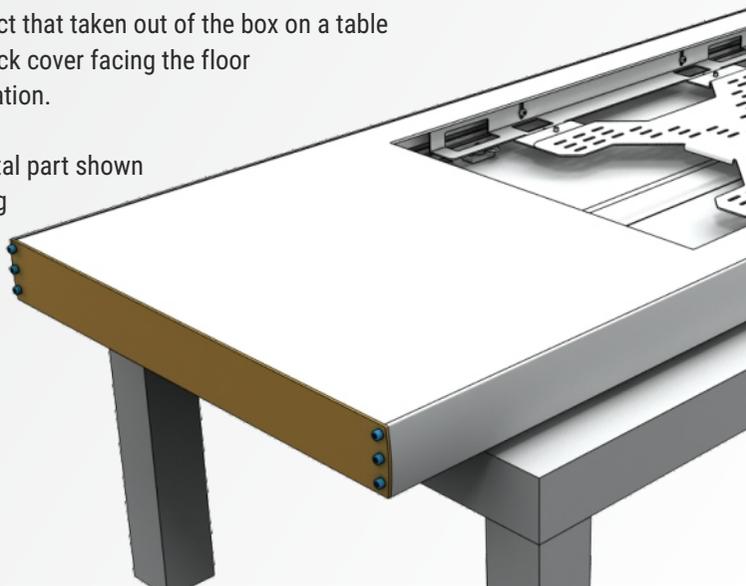

Step 2

- The floor flange of the product and the feet to be connected to the flange are packaged separately in the box.

- Fix the yellow feet, as shown in the following drawing, to the connection points on the flange by turning them clockwise. You can use these feet for balance adjustment after lifting the product.
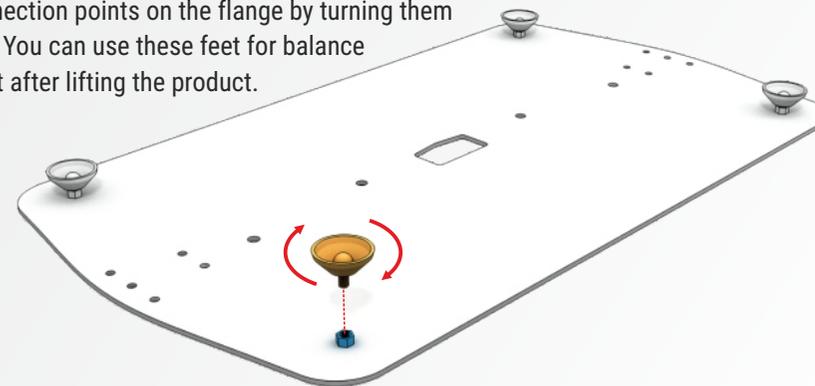

Step 3

- Assemble the floor flange, thats' feet are ready, to the base of cabinet from 10 points by using Allen 6 as shown in the following drawing.
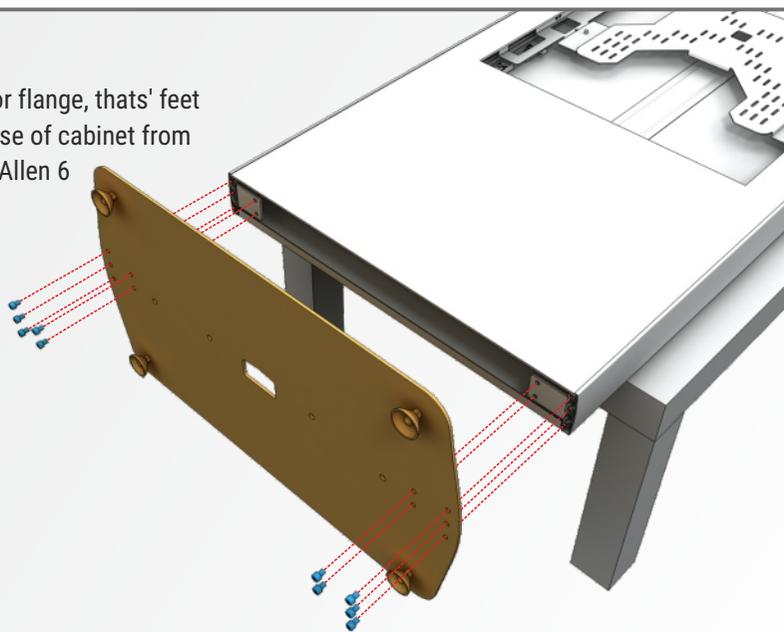

Step 4

After mounting the floor flange, our product is ready to stand up before the monitor assembly.
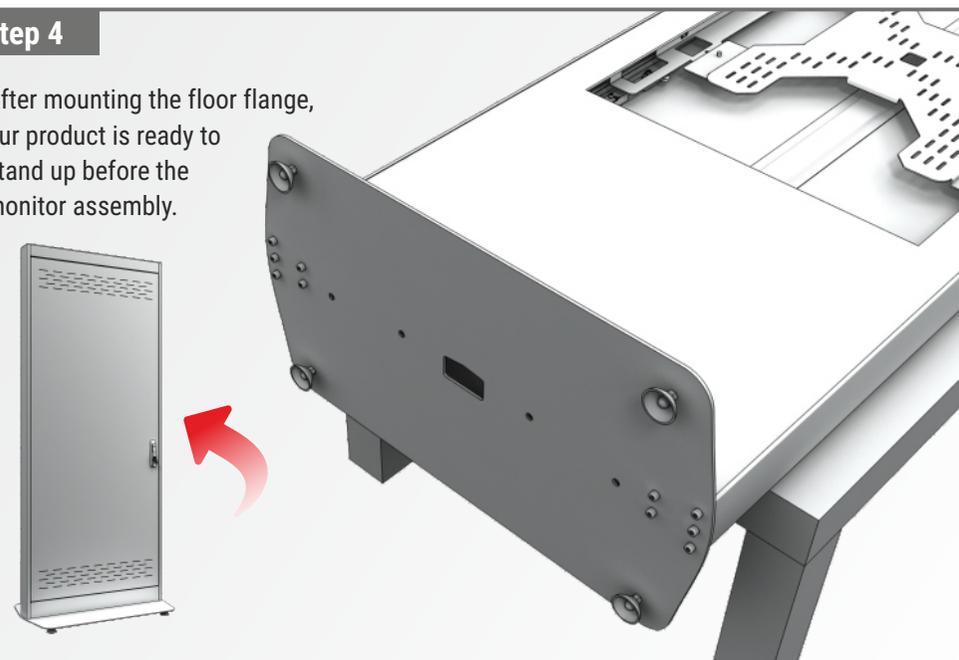

Step 5

- Open the back cover. If necessary, remove the back cover from the cabinet as shown in the illustration to make installation easier.
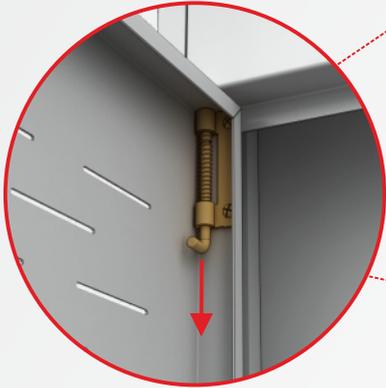

Step 6

- Remove the blue and yellow monitor brackets shown in the illustration from the cabinet using the allen 6.
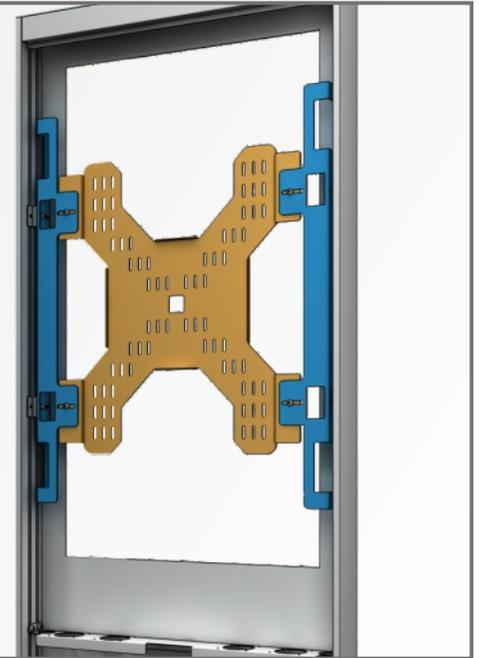

Step 7

- Connect the middle part of the monitor bracket to the appropriate VESA holes of your monitor with the appropriate bolts and tools as shown in the illustration.
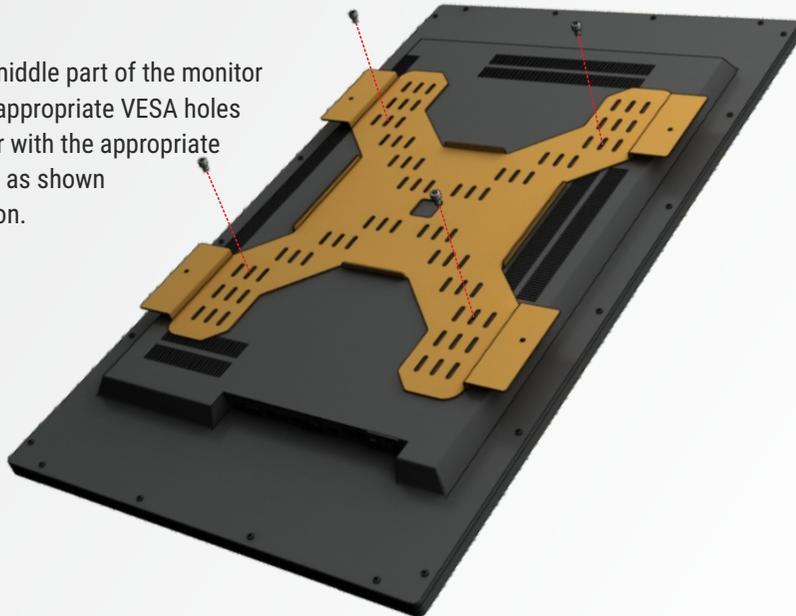

Step 8

- After mounted the middle part of the monitor bracket to your monitor, connect the side parts of the braket with the allen 6 as shown in the illustration.
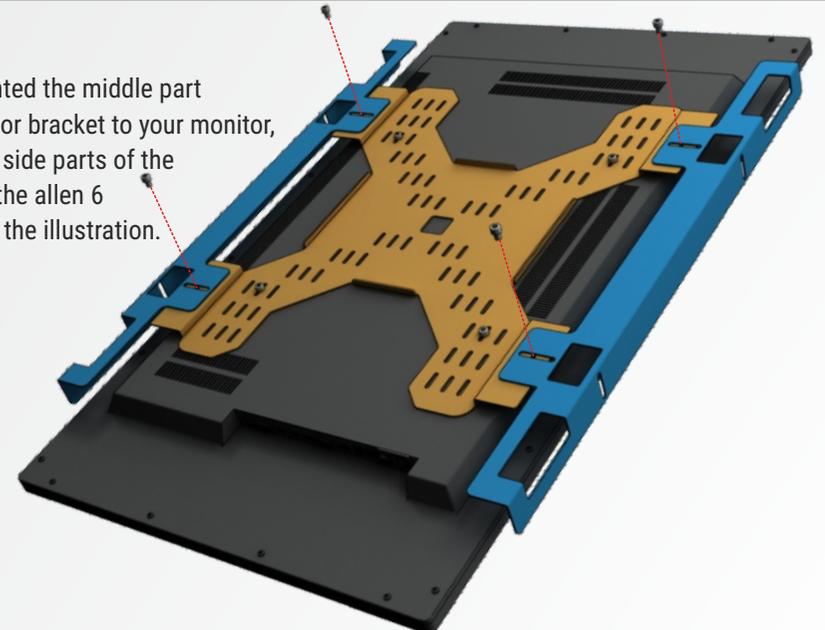

Step 9

- Place the bracket that you have connected with the monitor into the cabinet as shown in the illustration and fasten it with allen 6 through the connection holes shown.
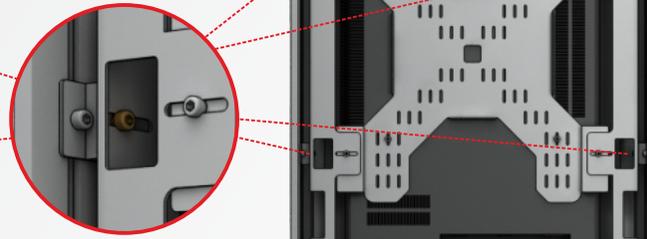

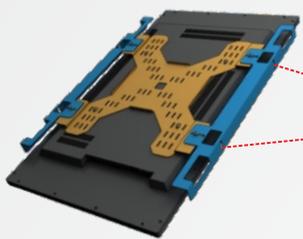

Step 10

- After the installation is finished, you can adjust the position and size of your monitor in the up-down, right-left and forward-backward directions from the points shown in the illustration.

forward
backward
right
left
up
down
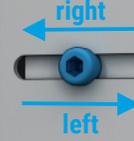

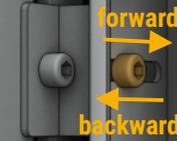

Step 11

- If you are going to put additional equipment such as a mini pc or media player in the cabinet, you can use the space shown in the illustration.

- You can connect the appropriate VESA bracket of your device with the holes that are in VESA standards.
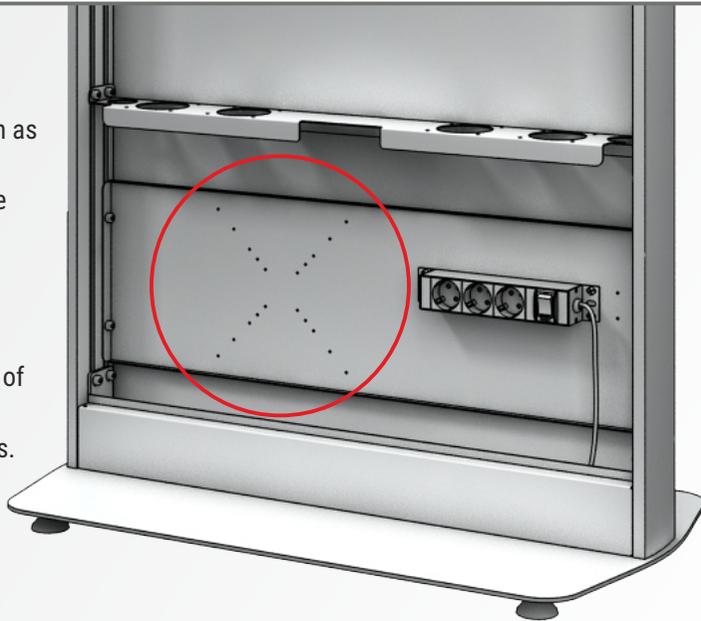

Step 12

- Take the cable from the PDU (Power Distribution Unit) inside the cabinet out of the area indicated by the blue arrow. If you want, you can also take out different cables such as network cable, external USB cable from this section.

- If you wish, you can fix your product to the floor from the places marked with red arrows. (Recommended)
